

CARVICO

Ideal for making bathing suits, this made in Italy Lycra is certified Oeko-tex 100. It does not contain formaldehyde, pentachlorophenol, cadmium, nickel and several other harmful chemicals. This Lycra by Carvico is treated to be twice as resistant to chlorine, salt water and sand as any other competing product. Its UV protection also allows it to retain its colour and shine.

MADE IN ITALY

UV protection

Ultrachlorine resistant

Resistance sun cream and oil

VITA BY CARVICO

For sportswear and swimsuits, this Vita Lycra is the perfect fabric to express your creativity while protecting the environment. This durable fabric, made of ECONYL® (recycled nylon), is versatile in addition to being the perfect balance between comfort and compression. The Vita Lycra by Carvico is soft, elegant, durable and offers SPF 50+ stretch resistance.

Shape retention

MALAGA BY CARVICO

Ideal for swimsuits and sportswear, the Malaga is a super mat Lycra charmeuse knit. It offers a perfect balance between elasticity and lightness.

Pilling resistant

Shape retention

ECONYL®

ECONYL® regenerated nylon is a product that can help you close the loop. Made from waste, it's infinitely recyclable and can unleash infinite possibilities for makers, creators and consumers. Nylon waste from landfills and oceans around the world is transformed into ECONYL® yarn, which is then used to produce our eco-friendly fabrics, that guarantee the same performances as standard fabrics. It's exactly the same as brand new nylon and can be recycled, recreated and remoulded again and again. That means you can create new products and buy new products without having to use new resources. Having passed several strict quality tests, our sustainable fabrics can ensure perfect fit, the correct muscular compression, excellent breathability, resistance to pilling and abrasions, and an amazing shape recovery power so that your garments will remain unaltered even after an intense use.*
